

ABSTRACT

A method, system and article of manufacture for a lampshade handbag. A lampshade handbag can include a chamber having a lampshade having a closed end and an open end; and, carrying means affixed to the lampshade. In a preferred embodiment of the present invention, the open end can have a diameter which exceeds a diameter of the closed end. In any case, a seal can be formed at the open end of the chamber. Moreover, at least one lampshade finial can be affixed to the lampshade, to the seal, or both. Similarly, a lampshade pull-chain can be attached to the lampshade, the seal, or both. Notably, the seal can include a seal selected from the group consisting of a removable top, a draw-string, a snap, a button and a zipper, to name a few.
